DETAILED ACTION

Response to Amendment

1. Applicant's amendment filed 1-31-05 and arguments have been fully considered and are persuasive. However, upon further consideration, a new ground(s) of rejection is made in view of 6,632,561.
2. The finality of the last office action is withdrawn.

Priority

3. A translation of foreign priority papers DE 19819752.7 filed 5-4-98 has been made of record in accordance with 37 CFR 1.55.

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claims 14, 20-22, 26, 28 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-8, 10-16 of U.S. Patent No. 6,632,561. Although the conflicting claims are not identical, they are

not patentably distinct from each other because US Patent No. 6,632,561 claims the exact same composition having (a) 1 to 99% by weight of a solid (I) with a primary particle size of from 5 nm to 100 um and (b) from 1-99 % by weight of a polymeric binder material (II) which is comprising (IIa and IIb). US Patent No. 6,632,561 claims the exact same composition as the solid (Ia) of the claim invention. US Patent No. 6,632,561 also claims that the polymer IIa is a polymer or copolymer of an acrylate or methacrylate and has reactive groups R_{Ga} which contain benzophenone units and reactive groups R_{Gb} which contain dihydrodicyclopentadiene units.

Claim Rejections - 35 USC § 112

6. Claims 23-28 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 23 is rejected because it is unclear what is method steps of the claim.

Claim 24 is rejected because in part (II) IB should be Ib.

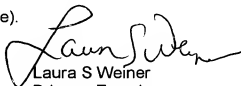

Claims 25-26 are rejected because it is unclear how a solid can consist of an electrolyte, a separator, an electrode, ... and an ion-conducting film. It is unclear how a solid could be an electrolyte or a separator or an electrode, etc. Each of the apparatus can comprise the composite but a solid wouldn't be one of the apparatuses listed in the claims.

Claims 27 and 28 are rejected because they depend on the above rejected claims.
